Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Response to Amendment

This Office Action is responsive to the Amendment filed August 14, 2007. The rejection of claim 32 under 35 U.S.C. 112 second paragraph is overcome. However, claims 6, 9-12, 24-31 are rejected under 103(a) as being obvious over Matsubara et al. U.S. Patent 6,797,434. The rejection is as follows:

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 6, 9-12, 24-31 are rejected under 35 U.S.C. 103(a) as being unpatentable over Matsubara et al. U.S. Patent 6,797,434.

Matsubara teaches a negative active material for a rechargeable lithium battery comprising a metal of one or more of Sn, Iron, Lead, Silicon, Indium and Copper. See column 3, lines 10-20. The negative electrode also includes a carbonaceous material capable of being doped and undoped with lithium. See column 3, lines 30-45. The

Art Unit: 1795

carbonaceous material is graphite. See column 3, lines 32-35. The C alament is lead or indium. See column 3, lines 10-20.

Matsubara does not expressly disclose the weight percents of claim 6 and 25-29 where A-B-C contains 5 to 40% by weight of second element B and 1 to 5-% by weight of the third element C.

However, it would have been obvious to one of ordinary skill in the art at the time the instant invention was made to employ instant percent ranges, since it has been held that discover an optimum value of a result effective variable involves only routine skill in the art. In re Boesch, 617 F.2d 272, 205 USPQ 215 (CCPA 1980). The skilled artisan recognizes the varying the amounts of active components directly effects the storage capacity and cycle life of the electrode.

Response to Arguments

Applicant's arguments with respect to claim 32 have been considered but are moot in view of the new ground(s) of rejection.
